Nonfat Dry Milk - Western U.S.

Report 32 - Released on August 12, 2021

In the West, the prices for low/medium heat nonfat dry milk (NDM) held steady at the top of the range, while moving higher at the bottom. The low/medium heat NDM mostly price series shifted higher. Contacts report a slight uptick in interest for low/medium heat NDM in domestic markets. International demand is holding steady, with notable purchasing for export to Mexico. Warehouse inventories are, reportedly, building in the region as a shortage of truck drivers and limited available shipping supplies are causing delays. Loads of low/medium heat NDM are available for spot purchasing. Condensed skim milk is accessible for production, allowing drying operations to run busy schedules. Similar to low/medium heat, the price range for high heat NDM was unchanged at the bottom, while pushing higher at the top. High heat inventories are limited but are in balance with the limited demand present. Production of high heat NDM is steady, as drying operations continue to focus on the shorter drying times of low/medium heat.
