Dry Whey - Central U.S.

Report 35 - Released on September 02, 2021

The bottom of the dry whey mostly series shifted a half cent lower, but all other prices were steady. Dry whey trading is moderately active. Stocks are available, but some contacts have begun to suggest more solids are moving into high protein processing. Those markets, particularly WPC 80% and whey protein isolate, remain firm. Lighter milk volumes are moving into Class III production, as is seasonally expected during the dog days of summer and the onset of the school year. Animal feed whey trading remains quiet. Feed end users are finding permeates and deproteinized whey at a value when compared to off-spec whey, which remains around \$.40. Dry whey market tones are quietly awaiting direction.
