Dry Whey - Central U.S.

Report 23 - Released on June 09, 2022

Dry whey prices were steady in most facets, although the price moved slightly higher on the top of the range. Contacts say there has been a stabilizing correction on the edible whey market. Demand has picked up, and some expect that to continue into the early summer season. They say this could create a potentially tighter market, as milk supplies are expected to slide with the warmer temperatures. Milk availability within the region currently, though, has recently increased coming off the holiday last week. Cheesemakers are and have been quite busy working through the extra milk recently available. Animal feed whey prices are unchanging on quiet markets. That said, some contacts reported offers above the current feed whey price range. Dry whey market tones are steadier than in recent weeks.

The DMN monthly average of the mostly price series for Central dry whey during May was \$.6006, compared to \$.6448 in April.
