Nonfat Dry Milk - Western U.S.

Report 8 - Released on February 23, 2023

Demand for low/medium heat nonfat dry milk (NDM) is steady in domestic markets. Ebbing prices for skim milk powder in international markets have, reportedly, contributed negatively for export demand for low/medium heat NDM. Prices for low/medium heat NDM have moved lower across the range and mostly price series. Spot purchasers say low/medium heat NDM inventories are available for purchasing. Milk production is strong in the region, and drying operations are utilizing available supplies to operate busy schedules. Some plant managers say strong volumes and high energy input costs are causing them to limit their production of high heat NDM. Demand for high heat NDM is steady, though spot inventories remain tight. The bottom of the high heat NDM price range followed low/medium heat NDM prices lower this week, while current market conditions have enabled the top of the range to remain unchanged.
