In the West, prices for low/medium heat nonfat dry milk (NDM) continue to increase at both ends of the range and mostly price series. Demand from domestic and international buyers varies from steady to stronger. Spot load availability continues to be tight in the region. Some stakeholders note they are receiving contractual loads of NDM with more recent production dates. Production schedules are steady. For some powder manufacturers, NDM production remains a higher focus than dry buttermilk production. High heat NDM prices increased at both ends of the range. Production schedules are mixed and demand is steady.
